

CLOOS at the AUTOMATICA 2022

**A wide variety of solutions for perfect welding results**

Munich/Haiger – From 21 to 24 June 2022 the AUTOMATICA, the leading exhibition automation and production-process innovations, took place in Munich. Here, companies from all branches of industry find the world's largest range of robotics, assembly lines and machine-vision systems.

CLOOS presented versatile solutions for automated welding and grinding at the booths of its partners FerRobotics, Doosan Robotics, Autonox Robotics and SERVO-ROBOT INC.

At FerRobotics, our project manager René Kring was available to answer questions from visitors interested in individual solutions for automated grinding.

Our welding engineer Alexander Murygin presented our latest COBOT welding solution ArcBoT at the Doosan booth. The optimum human-robot collaboration makes it easy to enter the world of automated welding.
